NRAS report on the impact of living with active RA but not being able to access advanced therapies

In 2020, NRAS conducted a survey amongst its members and non-members who had RA with a disease duration more than 2?years, who were not on advanced therapies (i.e. biologic/biosimilar or targeted synthetic DMARDs (JAK inhibitors)), with the aim of revealing the everyday impact of living with RA in people not treated with advanced therapies. It [...]
