HCP Only – GRA physician registry: COVID-19 cases after vaccination

If you are a healthcare provider Global Rheumatology Alliance physician registry are looking for patient clinical information on patients with COVID-19 after vaccination.

[Print](#)

The GRA physician registry is now focusing on patients who develop COVID-19 after their vaccination. If you have these patients, GRA would deeply appreciate if you could take a moment to enter their clinical information. We anticipate that it will take about 10 minutes per patient.

You can use the same on-line physician registry portal to enter a case. Have the details of which vaccine, timing of vaccination and whether immunosuppressive drugs were held handy. Please help GRA generate real world data to inform this important issue.

- The COVID-19 Global Rheumatology Alliance (GRA) registries are the collaborative work from an international group of rheumatologists, researchers, and patient partners.
- These registries are an international effort to collect information pertinent to COVID-19 infection in patients with rheumatologic disease.
- The de-identified information collected in these registries will be shared for analysis, with results shared with the public .
