Survey of people with rheumatic conditions about third primary vaccination doses

[Print](#)

A group of other charities and patient groups, including NRAS, is supporting a [rapid survey](#) aimed at all adults with a rheumatic condition in the UK, to understand the progress of the roll-out of third primary COVID-19 vaccination doses for people who are severely immunosuppressed. We have

heard from patients reporting difficulties accessing third primary doses. We hope the survey will help us to understand the scale of any issues, what has worked well, and what has not.

Please complete the survey whether or not you have received your third primary vaccination dose yet. You can also complete the survey if you have a rheumatic disease but do not think you are eligible for a third primary dose. This is a rapid survey so it will close on Monday midday 8th November.

Full guidance on third primary doses can be read [here](#).

Examples of rheumatic conditions include:

- Forms of connective tissue disease (for example: lupus, Sjogren's Syndrome, scleroderma)
- Form of systemic vasculitis (For example: Behcet's or types of ANCA Vasculitis like GPA)
- Giant Cell Arteritis
- Rheumatoid arthritis
- Psoriatic arthritis
- Axial spondyloarthritis (including ankylosing spondyloarthritis)
- Polymyalgia Rheumatica
